

2020 Product Enhancements

Enriched evidence. Expert guidance. Fast decision making.

BMJ Best Practice received several important enhancements during 2020. These improvements were developed in collaboration with health science librarians, physicians, medical students, and healthcare professionals from around the world. Institutional subscribers automatically received these upgrades; no further action is required.

Key 2020 enhancements include:

EVIDENCE TABLES AND SCORES

Healthcare professionals need to have confidence that the medical information they reference for decision making is based on reliable evidence. Our new unique Evidence Tables provide easy access to evidence layers in the context of specific clinical questions. Based on GRADE—the international standard in guideline development—the tables provide evidence scores and recommendations in a format that is easy to digest.

Clear links to the underlying evidence increase transparency on the quality of the evidence.

LOCAL GUIDANCE TOOL

Allows product administrators to add links to local guidance within *BMJ Best Practice* topic pages. Embedding key clinical information within relevant topics helps healthcare organizations ensure consistency of care. The information is stored centrally and easily accessible, sitting alongside national and international guidance.

APP IMPROVEMENTS

As always, the popular *BMJ Best Practice* app is included with every subscription, providing offline access to 1,000+ conditions and now 500 medical calculators. Recent improvements include the ability to copy and paste, a new 'Look Up' command, night mode, and the ability for Android and iPad users to view the app in a split screen.

Rated 4.8 by Apple and Android users.
Visit bestpractice.bmj.com/info/app
for download instructions.

COVID-19

A comprehensive COVID-19 topic was published in early 2020 and receives continuous updates. Key sections include history and exam, diagnostic investigations, and treatment algorithm. Visit bit.ly/BP_COVID19 to review the topic.

Patient leaflets and an additional topic regarding the management of coexisting conditions in the context of COVID-19 are also available.

Please let me know if you would like a demonstration of any of the new features!
